Developing technology as well as the development of means of communication, one website. Website is one of the effective means of communication, judging from the ease of access and coverage are up in every corner of the globe. Effectiveness to create a website can be used as media promotion, marketing, information, education and communication media (Kusuma Ardhana, 2012). These benefits certainly needed a company that requires a medium to introduce the company and accessible to all people, other than that the company would need a website that can keep track of the time in order to view the website look more modern and attractive. Website in order to keep abreast of the times would need to use latest programming language, and is currently being developed a programming language that is cleaner, simpler, and faster to access, namely HTML5 (Jubilee Enterprise, 2012). A website that uses HTML5 programming language would be very effective in showing the profile of a company and facilitate pengkases to find information about the company.

Keyword: Website, HTML5.
